## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1 and 14-27 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicant has amended independent claims 1, 18 and 19 to state that the coating does not result in a loss of the electrode's ability to measure current. There does not appear to be any support for this new limitation in the originally filed disclosure. In particular, the original disclosure never identified that the sensing characteristic was measuring current. The examiner recommends the applicant delete the "electrode's ability to measure current" in the claims and restore the previous use of --sensing characteristics of the electrode--. The examiner will withdraw the previous 112 rejection to this earlier limitation (albeit not the objection to the confusing term "desired").

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 1753

4. Claims 1 and 14-27 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

5. In claims 1, 18, and 19, applicant has substituted the previous term "3-carboxythiophene" for --4-carboxythiophene--. As the examiner has stated in numerous previous offices actions, both in this application and in the parent application, there is no such thing as 4-carboxythiophene, because the 3 and 4 sites of the thiophene are identical and naming convention require the use of the lower number for identical sites.

6. Claim 14 is dependent from cancelled claim 13. Claim 14 should be amended to change this dependence to claim 1.

***Allowable Subject Matter***

7. Claims 1 and 14-27 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, and if the applicant amends the claims in the manner suggested in the 35 U.S.C. 112, 1st paragraph rejection set forth in this Office action.

8. The following is a statement of reasons for the indication of allowable subject matter: The examiner has withdrawn the previous rejections of either Allen or Schlereth in view of French. French is drawn to the use a combination of sulfur containing moiety and surfactant to form a barrier layer on the electrode surface. By contrast, Allen and Schlereth are both drawn to the use of sulfur containing moieties for promoting electrochemical reactions on the electrode surface. Hence, one possessing ordinary skill in the art would not have looked to the teaching of French for a modification of either Allen or Schlereth because the goal of the surfactant and

Art Unit: 1753

sulfur containing moiety of French runs counter to the goal of the sulfur containing moiety of Allen and Schlereth.
